

ABSTRACT

A display unit comprises a display region 2 constituted of twenty-four display segments a to x each of which has a triangular display surface. The display region 2 consists of a quadrangular central region 10 and a quadrangular and annular peripheral region 13 to 16 surrounding the entire central region 10. The central region 10 has two quadrangular portions 11, 12 arranged one above the other. Each of two quadrangular portions consists of four display segments a to d or e to h. The peripheral region 13 to 16 is constituted of sixteen display segments i to x.
